User and Developer Guide

10 October 2026 | playerP2

Using the player

- Open the application and select Add to choose local media files.
- Double-click a playlist item to play it.
- Use Play/Pause, Stop, Previous and Next during playback.
- Seek with the progress bar or ten-second skip buttons.
- Adjust the volume slider; use Repeat or Shuffle for playlist modes.
- Use Track to switch available audio tracks. Vocals toggles a basic centre-channel filter; it does not fully remove vocals.

Full-screen playback

Press F or click Full Screen. Move the mouse to show the progress bar and playback controls. They hide after inactivity. Press Esc or Exit Full Screen to return to the standard window.

Keyboard shortcuts

Key	Action
Space	Play / Pause
Left / Right arrows	Seek backward / forward 10 seconds
N / P	Next / Previous file
F	Toggle full screen
Esc	Exit full screen

Build instructions

- Open playerP2.sln in Visual Studio 2026.
- Use Release and x64.
- Verify that the mpv headers and import library are present in third_party/mpv.
- Select Build → Rebuild Solution.
- Run the executable in build/bin/x64/Release. The matching libmpv-2.dll must be beside it.

Project directories

Path	Contents
src/playerP2/Source	C++/CLI source files
src/playerP2/Include	Project headers and form resources

Path	Contents
src/playerP2/Resources	Application resources and manifest
third_party/mpv	libmpv headers and libraries
docs	Technical documents and diagrams
tests	Test procedures
packaging	Release preparation files
build	Generated executables and intermediate files

Release checks

Build Release x64, run the regression checklist and verify the runtime dependencies on a second Windows PC. Review libmpv and bundled codec licences before distributing the executable.
